Application Principle

Straight modules can be cut in different lengths and angles freely for application. Curve modules and straight modules can be interconnected with accessories for random interconnection and application. Through the modules of lighting inward/lighting outward, the 3D spacial application could be realized. Limitless possibilities lead to limitless applications and thousands of styles.

Application Principle NEW

φ320mm small curve modules get rid of the constraints of space, and can bend freely in a narrow space; the twist modules make the lighting surface flipping arbitrarily in the space. The new modules raise the freedom of curve system to a new height.

50% higher in lighting efficiency

Interconnected Use

The straight lines in different lengths and curves with different radians can be combined and interconnected freely, they can be interconnected and extended on the ceiling for varieties of styles, or interconnected in vertical or horizontal space for pendant, or used freely in the 3D space along the edge of ceiling, wall and floor.

Limitless extension on the ceiling

Free interconnection for pendant
